RE: Outcome Data Analysis for BRC Recover

To whom it may concern:

NLW Partners was contracted to construct a clinical outcomes database and provide detailed statistical analysis for BRC Recovery. The primary instrument of assessment was the Addiction Severity Index, a standardized and well validated measure. The assessed dates were from January, 2013 to January, 2016 and included over 400 patients, assessed at intake, 90 days, and 180 days of treatment. A highlight of the report results are included below.

Report Highlights

- 77% of individually successfully complete the programs
- Those who enter Sober Living have a 99% success rate
- For those who complete residential living there is a:
 - 73% reduction in **Alcohol** Composite Score
 - 81% reduction in **Drug** Composite Score
 - 45% reduction in **Medical** Composite Score
 - 44% reduction in **Legal** Composite Score
 - 73% reduction in **Family/Social** Composite Score
 - 68% reduction in **Psychiatric** Composite Score
